

Potential displacement of Air1 Radio by expanded LPFM signals will be detrimental to families in affected areas. Air1 offers positive music that young listeners can enjoy without out the threat of offensive or inappropriate content. Air1 is also commercial-free, which again offers a safe listening environment where adolescents are not exposed to continual solicitations and negative marketing pressure. The Air1 signal in this area is not very strong, so I fear that any interference will prevent local citizens from hearing it. Thanks.
